                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1561
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1621
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The predicted N-terminal AA sequence of PG-2a occurs at AA72. Since the ATG at bp 51 codes for the only inframe methionine preceding the N-terminal sequence of PG-2a, it is probable that the mRNA is translated with a 71AA pre-sequence that is subsequently cleaved to give a 41,828D mature protein.

The inverted sequence and the PG mRNA form a double-stranded structure which inhibits ex- pression of the PG mRNA. See also AAN80488. (Updated on 25-MAR-2003 to correct PA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This is the sequence of polygalacturonase from clone pTOM6. The clone was used to isolate the PG promoter in the construction of a vector encoding antisense RNA to the PG cDNA and PG gene. This would be useful to regulate the expression of the fruit softening enzymes in flowering and fruiting plants. Such antisense RNA would delay fruit softening. (Updated on 25-MAR-2003 to correct PN field.) (Updated on 25-MAR-2003 to correct PN field.) (Updated on 27-MAR-2003 to correct PN field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention provides a new method for modifying pectin that involves providing a host having pectin methylesterase (PME) activity and polygalacturonase (PG) activity, transforming the host by silencing PG activity to provide an increased PME to PG ratio, preparing a PME extract from the transformed host, and using the PME extract to modify pectin. A PME modified pectin is useful for foodstuffs preparation, and to impart an increased functionality to food products such as yogurt, milk/fruit juice and whey drinks. PME is useful to reduce the number of ester groups in a pectin in a block-wise manner, and to de-esterify two or more adjacent galacturonic acid residue of a pectin on at least substantially all of the pectin chains. The present sequence represents a PG enzyme encoded by a pTOM6 cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Modifying pectin, for foodstuffs preparation, involves transforming host having pectin methylesterase (PME) and polygalacturonase (PG) activity by silencing PG activity, to increase PME to PG ratio.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence

                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to forming an ester or amide bond between monomeric or polymeric ester or its acid or salt and monomeric or polymeric alcohol or amine by treating the ester or its acid or salt with a plant pectin transester synthase in the presence of alcohol or amine under conditions to form ester or amide bond. The method is useful for forming an ester or amide bond between monomeric or polymeric ester or its acid or salt (e.g. homogalacturonan) and monomeric or polymeric alcohol or amine. It is useful for producing pectin-based polymers e.g., xyloglucan or D- or L-polylysine, useful for the slow release of compounds in the body e.g., heparin with anticoagulant or other pharmaceutical properties. The present sequence represents an endopolygalacturonase enzyme from tomato
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Formation of ester or amide bond between ester and alcohol involves treating the ester or its acid or salt with plant transester synthase in the presence of alcohol or amine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               31-AUG-2001; 2001US-0316777P.

                                                                                                                                                                                                                                                                                                                                                                                         for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from plant organisms using suitable search parameters, where plant sequences having an E-value greater by a factor of 3 than the E-value of most similar non-plant sequences are selected. The polypeptides or nucleic acids encoding them are useful for identifying modulators. The identified modulators are useful as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Identifying plant target proteins for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              WPI;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           S
seed production. The promoter is used to drive expression of a further nucleic acid sequence that results in prevention or reduction of anther dehiscence. For example, expression of the RNase barnase causes cell ablation, while expression of a plant hormone alters the developmental fate of a cell. Plants are produced that have phenotypically normal pollen grains, within phenotypically normal anthers, but in which the anthers do not dehisce and thus do not release the pollen grains. The system allows the female to be multiplied with the artificial male sterility gene in the homozygous state, since the female plant produces viable pollen. The system is suited to crops which have high seed multiplication, large amounts of pollen, and/or separate male and femal inflorescences. These factors allow for easy collection of pollen from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ESJ2A gene;

Such an ideal crop is the monocot maize, but the system is also applicable to e.g. wheat, barley, rice, fodder grass, banana, palm, orchid, tulip, lily, melon, cucumber, tomato, pepper and willow. It is also useful the avoidance or reduction of pollen allergens and may be effective the control of asthma caused by pollen release
                                                                                                                                                                                                                                                    EP1033405-A2

The polypeptides or nucleic acids encoding them are useful for identifying modulators. The identified modulators are useful as
                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 431 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Identifying plant target proteins for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequence from plant with nucleic acid or amino acid sequences from non-plant
